SUMMARY

BCA graduate specializing in applied machine learning and data science, with hands-on experience across two internships building and deploying ML models — from experiment tracking and classification systems to deep learning-based image classification and demand forecasting. Proficient in Python, TensorFlow/Keras, Scikit-learn, XGBoost, and MLflow, with experience taking projects from data preprocessing through evaluation and deployment.

TECHNICAL SKILLS

- **Languages:** Python, Java, SQL
- **Machine Learning / Deep Learning:** TensorFlow, Keras, Scikit-learn, XGBoost, CNNs, Transfer Learning (MobileNetV2), Logistic Regression, Random Forest, Decision Trees
- **MLOps & Tooling:** MLflow (experiment tracking & model management), Streamlit, Jupyter Notebook, GitHub
- **Data:** MySQL, Data Preprocessing, Exploratory Data Analysis (EDA), Feature Engineering

INTERNSHIP EXPERIENCE

AI/ML Intern — Cynaris Solutions (*Remote*) Feb 2026 – May 2026

- Built and deployed an end-to-end MLflow pipeline covering experiment tracking, model versioning, and model management for a wine classification use case.
- Trained and compared Logistic Regression, Random Forest, and Decision Tree classifiers, using MLflow to log experiments and select the best-performing model.
- Developed a Streamlit dashboard to serve real-time predictions from the deployed model.

Data Science & Machine Learning Intern — Infotact Solutions (*Part-time*) Mar 2026 – Jun 2026

Crop Disease Detection using Deep Learning

- Built a CNN-based image classification model using TensorFlow/Keras and the PlantVillage dataset to detect crop diseases from leaf images.
- Applied MobileNetV2 transfer learning and image preprocessing to improve model performance on limited training data.
- Designed and evaluated an inference pipeline for predicting disease class from new leaf images.

AI-Based Restaurant Demand Forecasting & Inventory Optimization

- Built a demand forecasting model using Python, XGBoost, and Scikit-learn to predict restaurant sales from historical data.
- Conducted data preprocessing, EDA, and feature engineering to surface sales patterns and improve forecast accuracy.
- Translated model outputs into inventory-management insights aimed at reducing food waste.

PROJECTS

IoT-Driven Smart Irrigation System for Precision Farming

- Designed a sensor-based irrigation system using soil moisture and temperature data to automate watering decisions and reduce water wastage.
- Built a companion mobile app for remote field monitoring and system control.

Accessible Web Platform for Low-Literacy Users

- Designed a website with simplified layouts, icon-based navigation, and voice guidance to improve digital accessibility for low-literacy users.
- Added multilingual support to broaden usability across language groups.

EDUCATION

People Education Society (PES) University, Bengaluru, India Aug 2023 – Jul 2026

Bachelor of Computer Applications (BCA)

Sri Vidyaniketan PU College, Gangavathi, India Jul 2021 – Mar 2023

Class 12

Central Public School, Karatagi, India Completed Mar 2021

Class 10

CERTIFICATIONS & HACKATHONS

MHacks 3.0 — Problem Solving Hackathon (2024) | Init — Technical Problem Solving Hackathon (2025) | Tutedude — Machine Learning (2025) | Acmegrade — Data Science Training & Internship (2025)
